How to install Speedmax Algo V1.0

Every step shown with real screenshots: download, copy into MT5, attach to a gold chart, enter your licence key.

speedmaxalgo.com

What you need

- 1. MetaTrader 5 (desktop)** on a Windows computer or a Windows VPS, logged in to your trading account. The robot runs inside MT5, so MT5 must stay open for it to trade. A VPS keeps it running 24/5 even when your own computer is off.
- 2. A broker that offers gold (XAUUSD).** Speedmax Algo trades gold only, on the 30-minute (M30) chart.
- 3. Your licence key.** It arrives in your purchase email and looks like **SMX-XXXX-XXXX-XXXX**. One key activates one MT5 account. Without a valid key the robot will not trade, and it will not run in the Strategy Tester.
- 4. The robot file SPEEDMAX ALGO.ex5** (about 2.7 MB), downloaded in Step 1.

The install in 5 stages

- A. Download** the robot file (Steps 1-2)
- B. Copy it into MT5:** Data Folder > MQL5 > Experts (Steps 3-7)
- C. Refresh MT5** so the robot appears in the Navigator (Steps 8-9)
- D. Attach it** to an XAUUSD M30 chart (Steps 10-13)
- E. Enter your licence key** and switch on Algo Trading (Steps 14-16)

It takes about 5 minutes. The screenshots were taken on a Windows VPS running MetaTrader 5; a normal Windows PC looks the same. Red boxes and numbers show exactly where to click.

TIP

Using a Mac? Install MetaTrader 5 for Mac, or (recommended) rent a Windows VPS and connect to it with the free **Windows App** (Microsoft Remote Desktop). Then follow this guide inside the VPS.

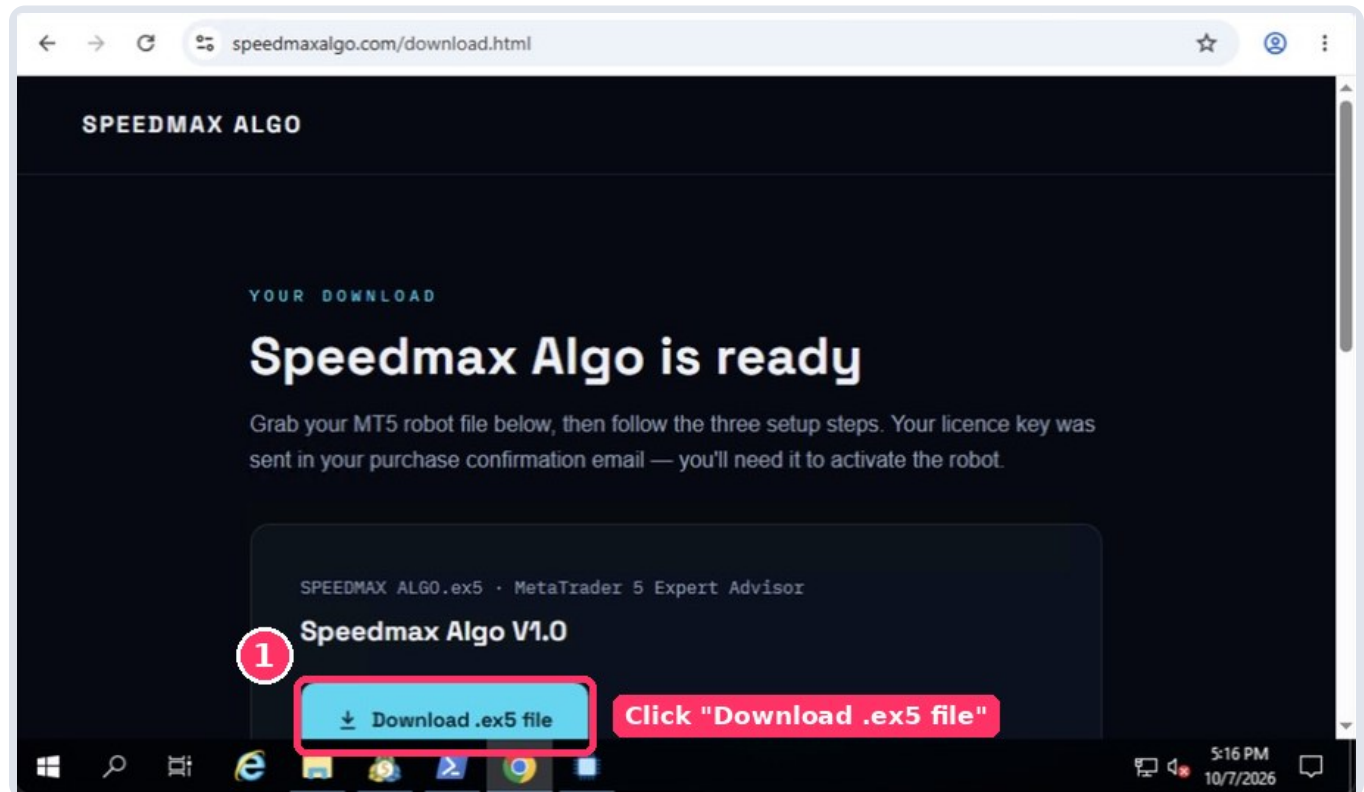

1 Download the robot

Open your purchase email and click **Download your robot**, or go to **speedmaxalgo.com/download.html**.

Click the blue **Download .ex5 file** button.

TIP

Do this on the computer or VPS where MetaTrader 5 is installed.

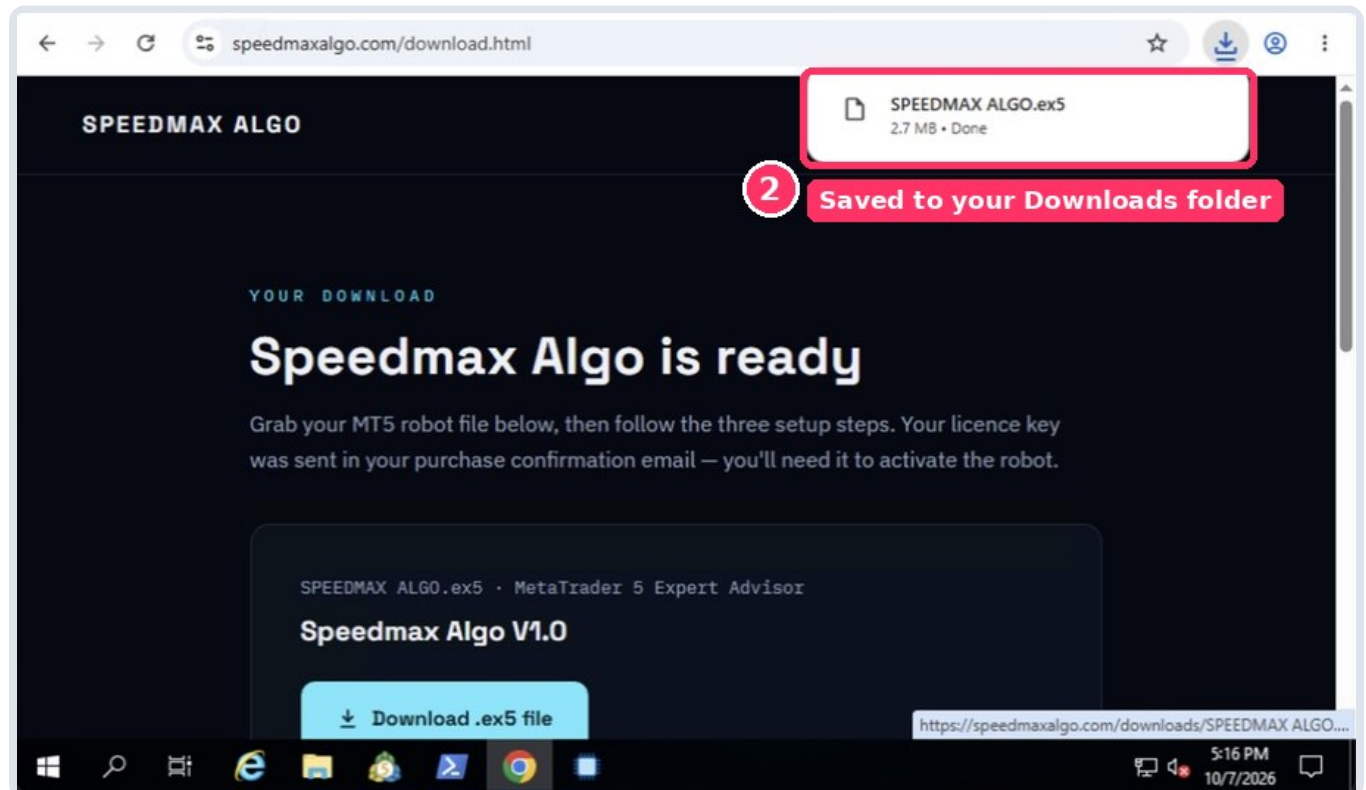

2 Check the download finished

Your browser shows **SPEEDMAX ALGO.ex5** · **2.7 MB** · **Done**.

The file is saved in your **Downloads** folder. Do not double-click it: an .ex5 file is opened by MetaTrader, not by Windows.

TIP

If Windows or your browser asks whether to keep the file, choose **Keep**.

3 Open the MT5 Data Folder

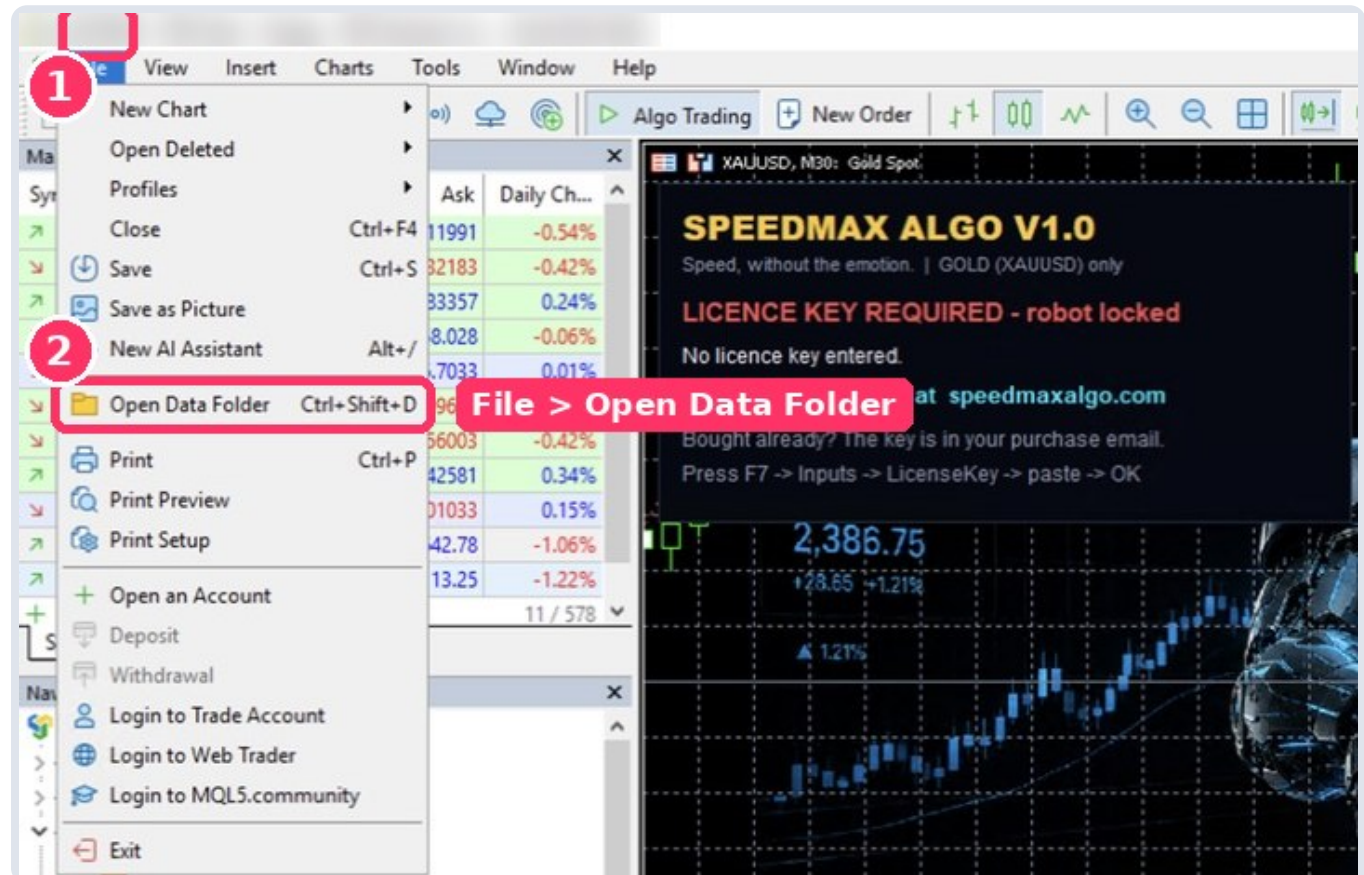

In MetaTrader 5 click **File** (1) in the top menu.

Click **Open Data Folder** (2). Shortcut: **Ctrl + Shift + D**.

A File Explorer window opens on your MT5 data folder.

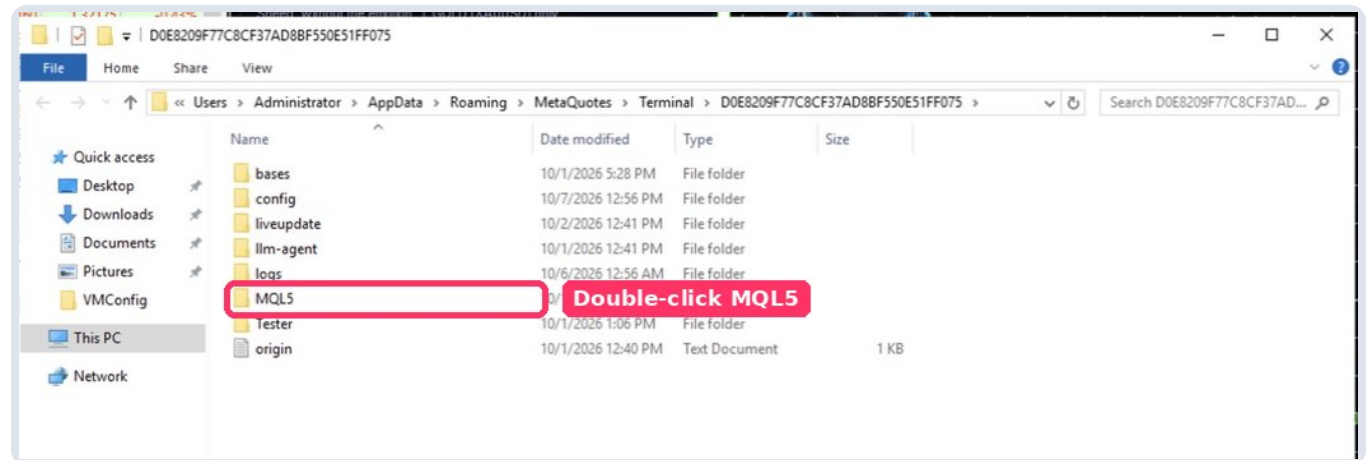

TIP

Always use this menu item: it opens the exact folder MT5 reads, even if you have several MT5 installations.

4 Open the MQL5 folder

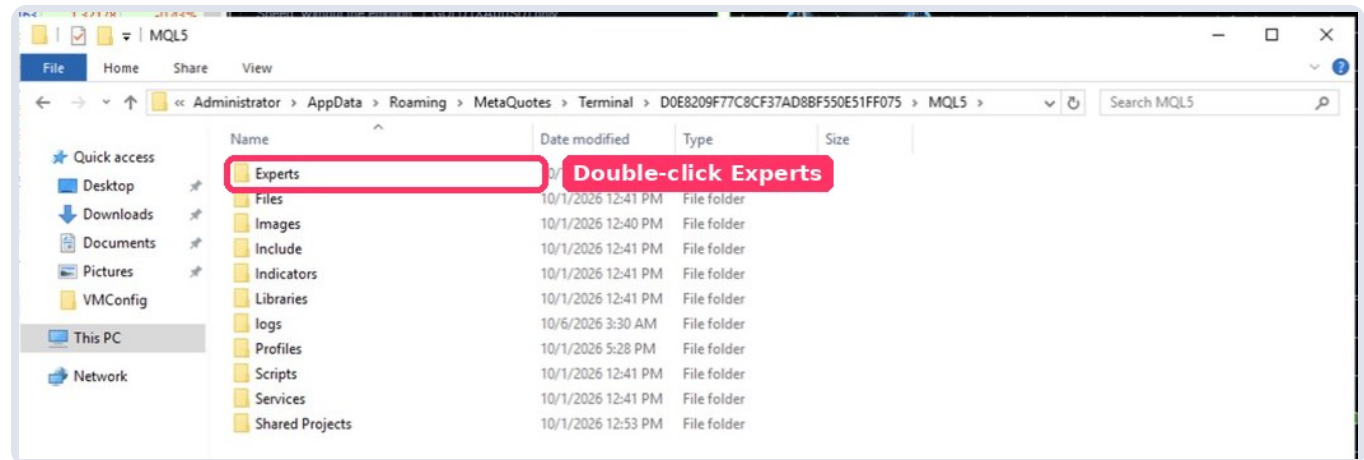

In the window that opened, double-click the **MQL5** folder.

5 Open the Experts folder

Inside MQL5, double-click the **Experts** folder.

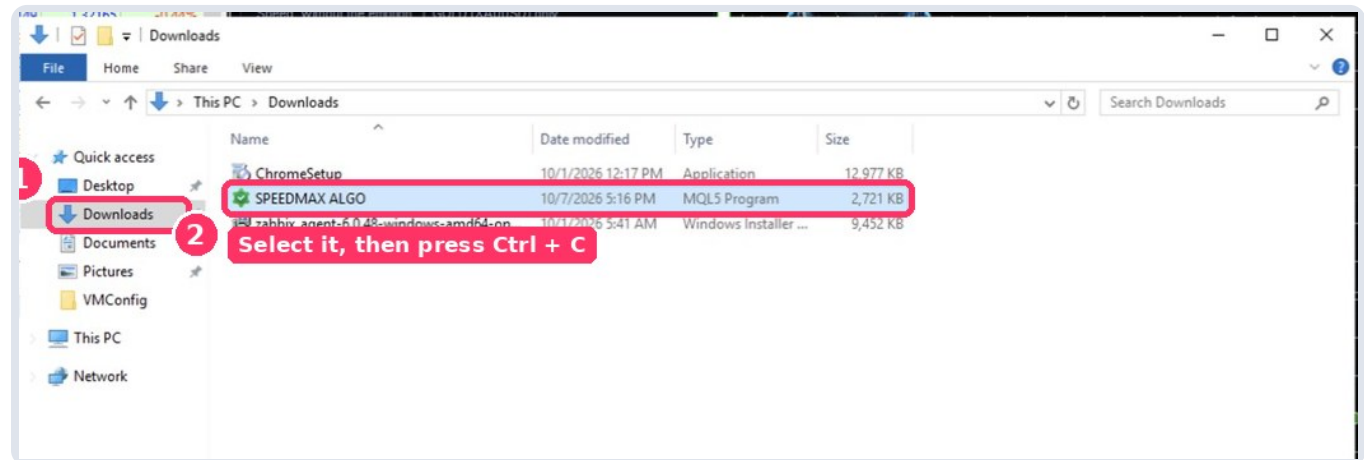

This is where MetaTrader 5 keeps its robots (Expert Advisors). Keep this window open.

6 Copy the robot file

In the same window click **Downloads** (1) on the left.

Click once on **SPEEDMAX ALGO** (2) to select it, then press **Ctrl + C** (or right-click > Copy).

TIP

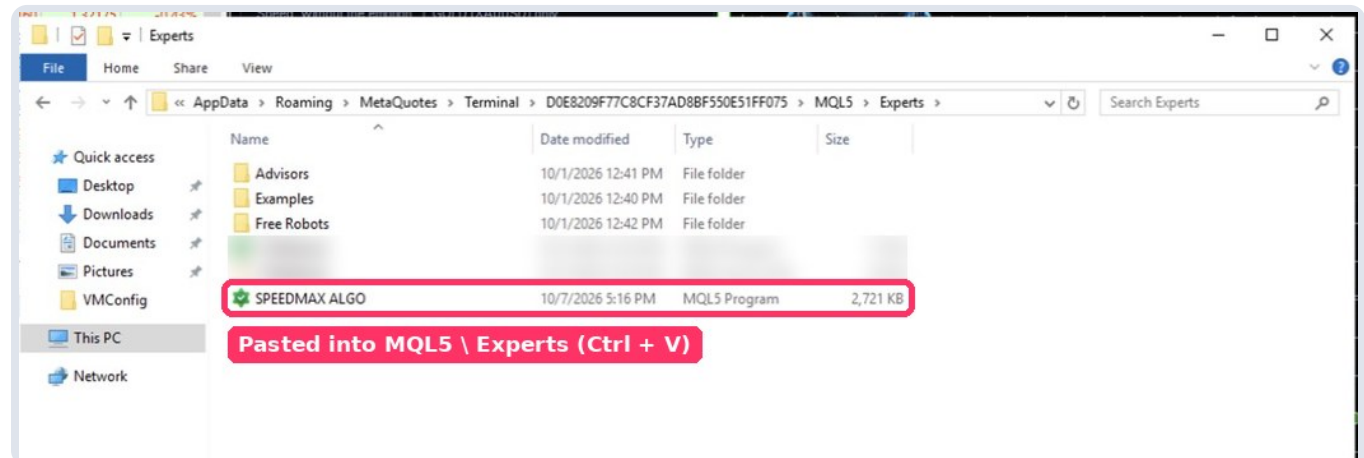

The file type shows as **MQL5 Program** with a green icon. That is the right file.

7 Paste it into Experts

Click the **back arrow** (top left of the window) to return to **MT5 > Experts**.

Click an empty white area and press **Ctrl + V** (or right-click > Paste).

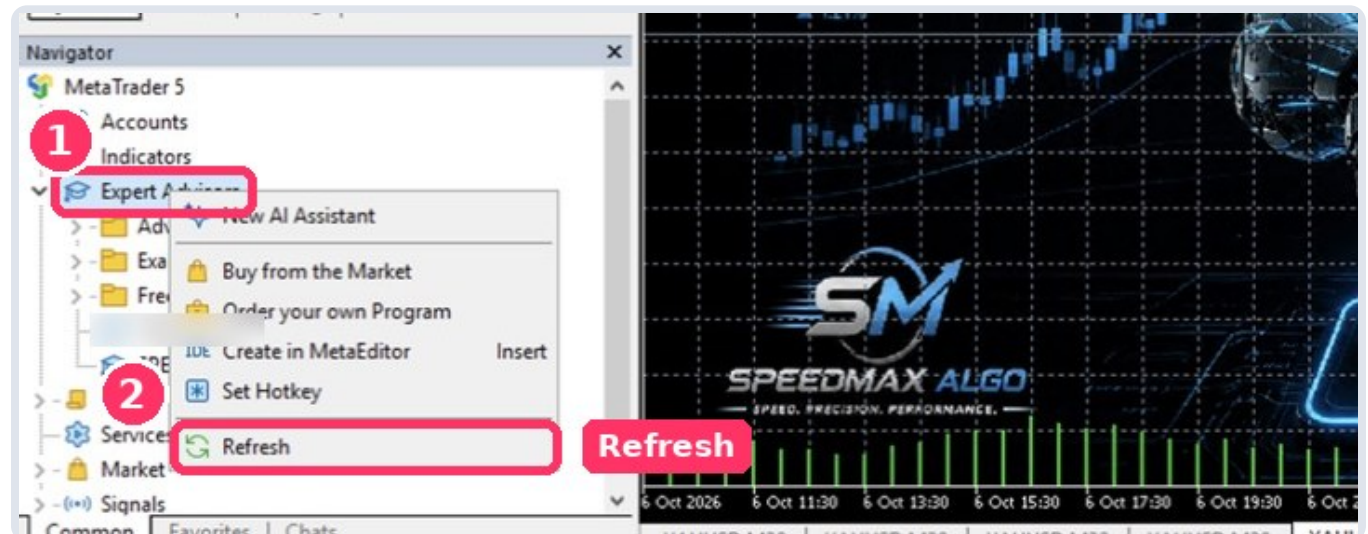

SPEEDMAX ALGO now appears in the Experts folder. You can close this window.

8 Refresh the Navigator

Back in MT5, open the **Navigator** panel if it is not showing: press **Ctrl + N**.

Right-click **Expert Advisors** (1) and click **Refresh** (2).

TIP

Restarting MetaTrader 5 also refreshes the list.

9 Find Speedmax Algo in the list

Expand **Expert Advisors: SPEEDMAX ALGO** is now listed with a blue robot-hat icon.

If you do not see it, repeat Step 8 or check the file is in MQL5 > Experts (Step 7).

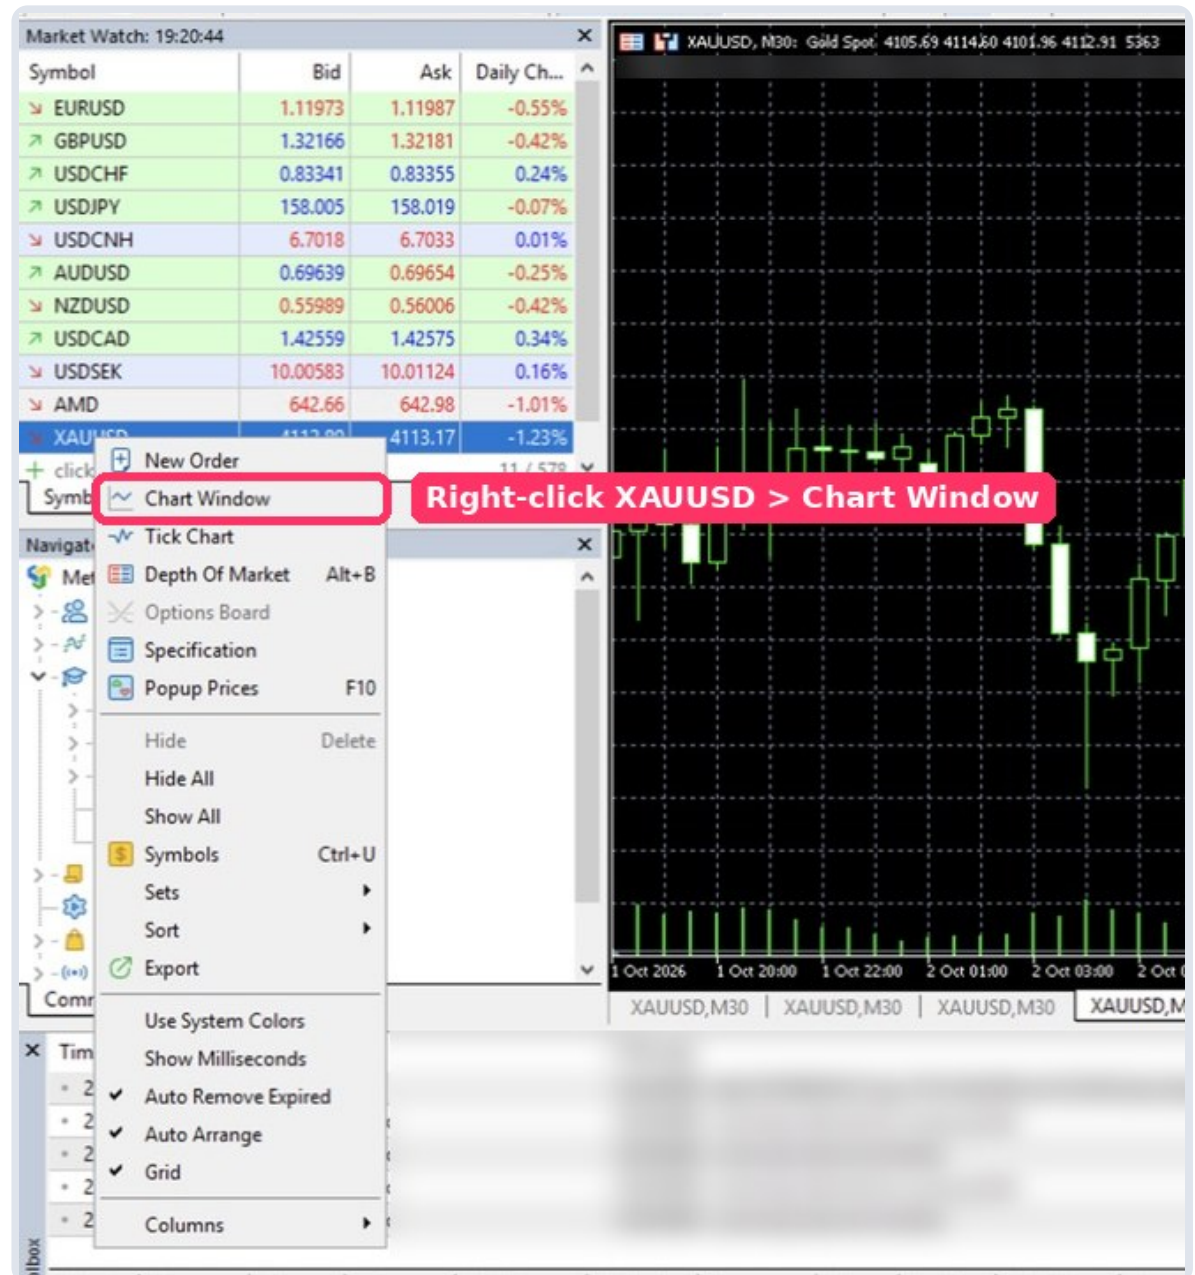

10 Open a gold (XAUUSD) chart

Open **Market Watch** with **Ctrl + M**.

Right-click **XAUUSD** and choose **Chart Window**.

TIP

Not listed? Right-click in Market Watch > **Symbols** and search for gold. Some brokers name it **GOLD** or add a suffix such as **XAUUSD.m** — use your broker's gold symbol.

11 Switch the chart to M30

On the new gold chart, click **M30** on the toolbar so each candle is 30 minutes.

The chart title should read **XAUUSD, M30**.

TIP

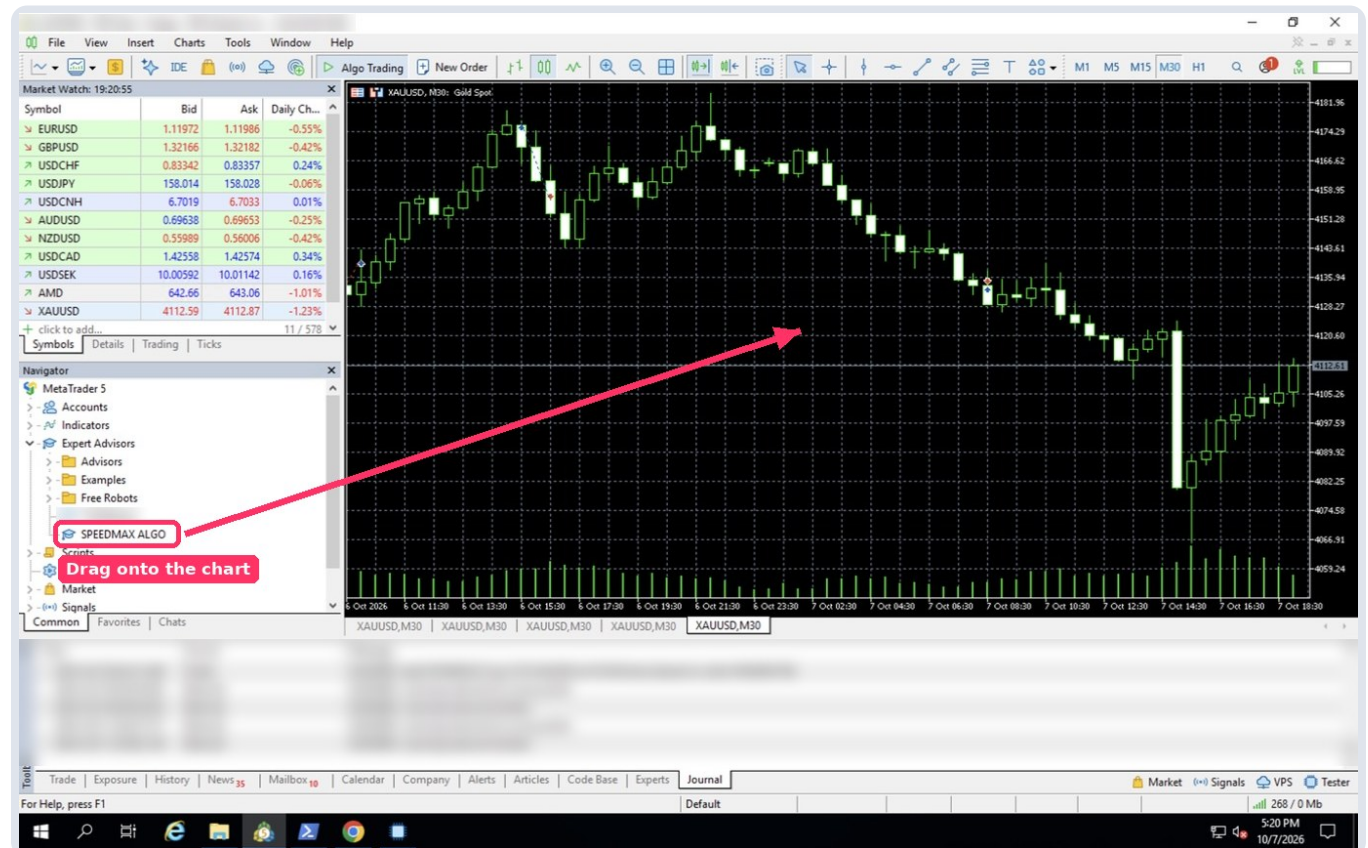

Speedmax Algo is built and tested for the 30-minute chart.

12 Drag the robot onto the chart

In the Navigator, click and hold **SPEEDMAX ALGO**.

Drag it onto the gold chart and let go.
(Double-clicking it also works.)

The robot settings window opens.

TIP

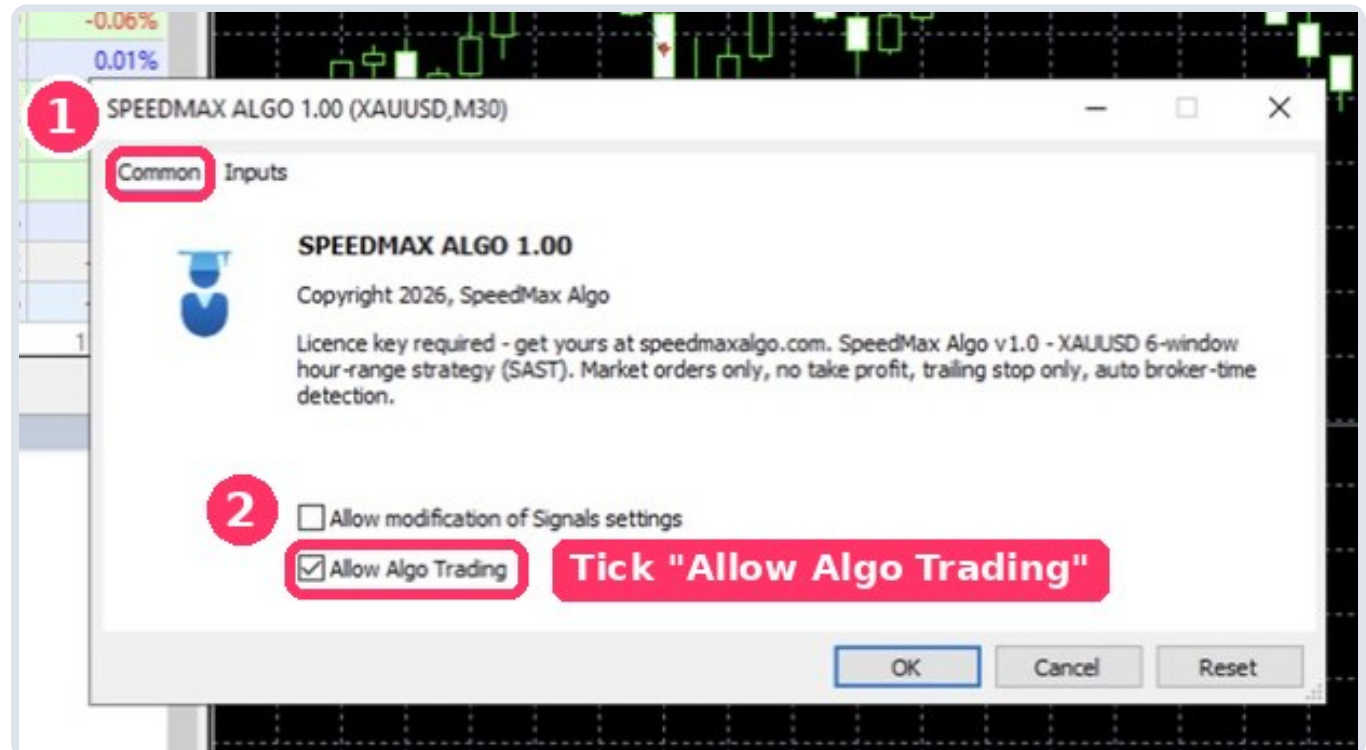

Use one chart only. Do not attach Speedmax Algo to several charts on the same account.

13 Common tab: allow Algo Trading

In the settings window open the **Common** tab (1).

Make sure **Allow Algo Trading** is ticked (2).

Do not click OK yet — go to the Inputs tab next.

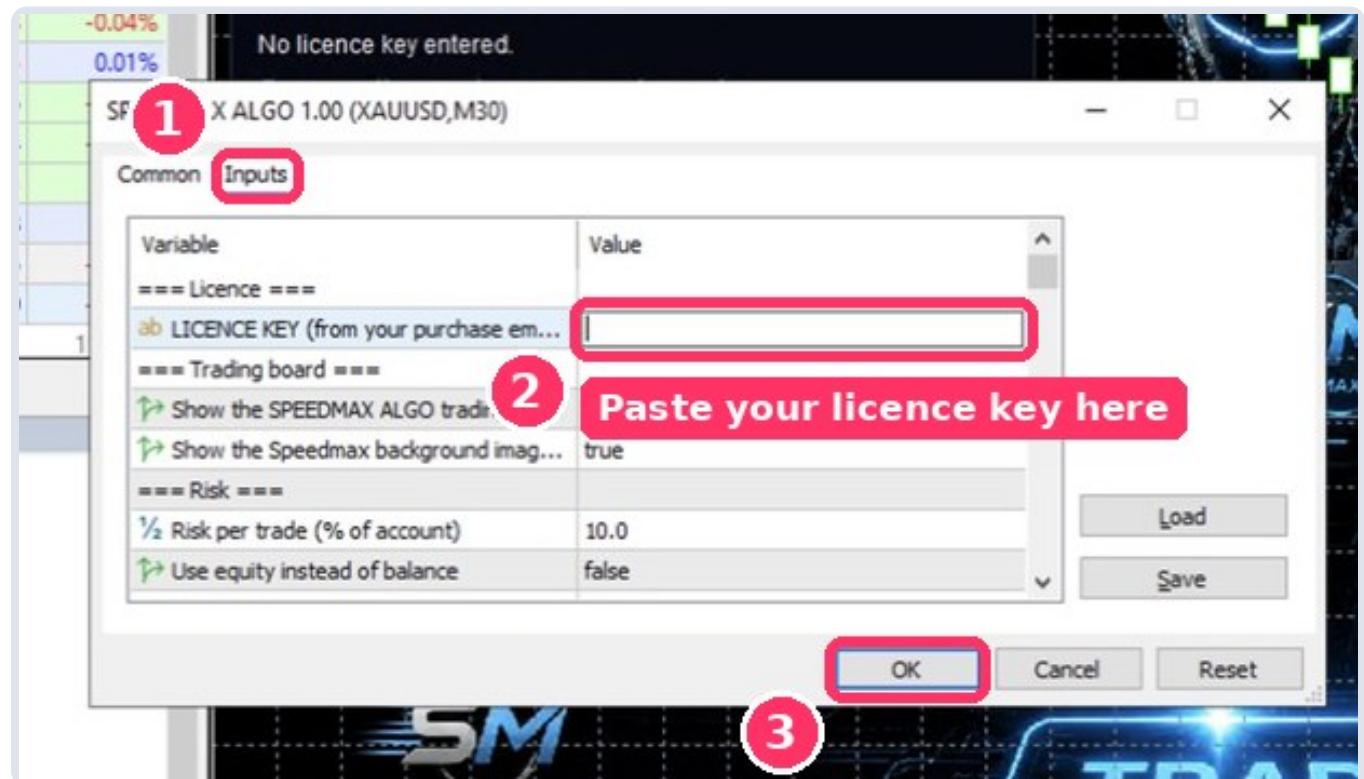

14 Inputs tab: paste your licence key

Open the **Inputs** tab (1).

Double-click the **Value** box next to **LICENCE KEY** (2) and paste your key exactly as in your email, e.g. **SMX-XXXX-XXXX-XXXX** (capital letters and dashes). Press Enter.

Click **OK** (3).

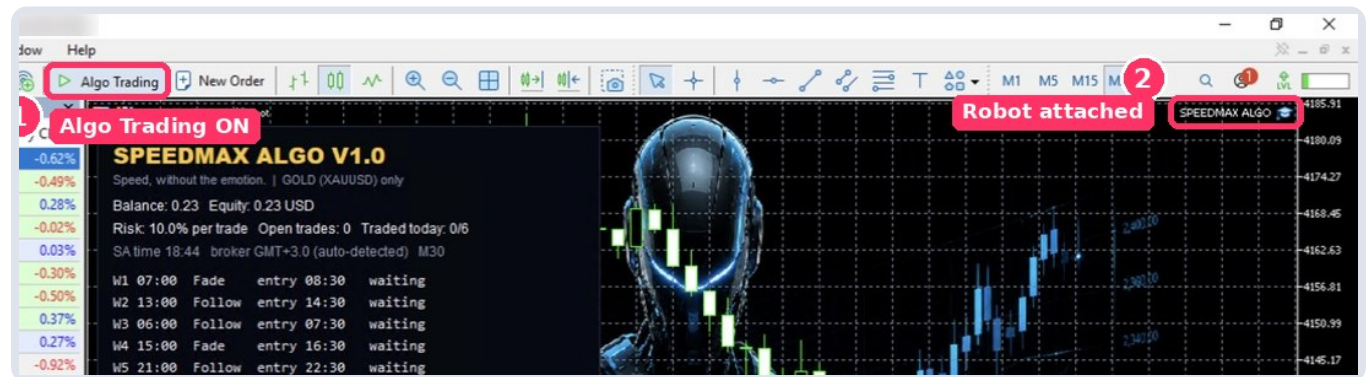

TIP

Leave the other settings as they are unless you know what they do. **Risk per trade (% of account)** sets how much of your balance each trade risks.

15 Switch on Algo Trading

Make sure the **Algo Trading** button on the toolbar (1) is ON (green play icon). If it is red, click it once.

Top right of the chart you see **SPEEDMAX ALGO** with a **blue hat** (2): the robot is attached and allowed to trade.

TIP

If the hat is grey, open **Tools > Options > Expert Advisors** and tick **Allow algorithmic trading**.

16 Check the Speedmax trading board

The chart shows the Speedmax background and the **SPEEDMAX ALGO V1.0** trading board. With a valid key it shows:

- **Balance** and **Equity** of your account
- **Risk** per trade, **open trades** and how many windows **traded today**
- South African time and your broker's time zone (detected automatically)
- The six trading windows **W1-W6**: entry time and status (waiting, done today, or the open trade with its profit)
- **Licence: ACTIVE** in green

That's it — the robot now trades by itself. Keep MetaTrader 5 open (or use a VPS).

TIP

Board red with **LICENCE KEY REQUIRED - robot locked?** The key is missing or mistyped. Press **F7** on the chart > Inputs > paste your key > OK.

If something is not right

Speedmax Algo is not in the Navigator. Check the file is inside **MQL5 > Experts** (use File > Open Data Folder to be sure), then right-click Expert Advisors > Refresh, or restart MT5.

"Invalid licence key" or the board stays red. Press F7 on the chart, open Inputs and paste the key again exactly as in your email — capital letters and dashes, no spaces before or after. Click OK.

The robot hat is grey or the Algo Trading button is red. Click the Algo Trading button once, and check Tools > Options > Expert Advisors > **Allow algorithmic trading**.

No trades yet. The robot only enters at set times of day and only one trade per window per day, so quiet periods are normal. Keep MT5 open (or use a VPS) and keep the chart on XAUUSD M30.

The Strategy Tester stops immediately. Backtesting also needs your licence key: in the tester settings open Inputs and paste the key into LICENCE KEY.

Good to know

Your licence never expires. One key activates one MT5 account.

To move the robot to a new computer or VPS, repeat Steps 1–16 there with the same key (on the same MT5 account).

Updates: download the newest file from your email link and replace the old one in MQL5 > Experts, then attach it again.

Need help? Reply to your purchase email and a person will help you.

RISK WARNING

Trading gold on margin carries a high level of risk and you can lose money. Past performance and backtests do not promise future results. Only trade money you can afford to lose. Speedmax Algo is a tool, not financial advice.
